

T H WHITE AGRICULTURE

We are one of the largest agricultural machinery dealers in the country, selling New Holland and Case IH tractors and harvesting machinery, tillage and cultivation equipment, in addition to parts, service, repairs and used machinery.

Apprentices attend a block release course at college where they receive practical training, working towards a qualification in Agricultural Engineering.

All apprentices are offered training in forklift operation, grinding, welding and health and safety, as well as specialist product training from suppliers.

For details of apprenticeships or to make an application, please contact Jacqui Grace, jag@thwhite.co.uk, or call 01380 722381.

Our divisions have branches in a wide range of locations. If you have an interest in a particular location or business area and want to know more, you can speak to our branch managers for more information, but please make apprenticeship applications through Jacqui Grace.

Liam Farmer Lorry Cranes Apprentice

I started my apprenticeship at T H WHITE in 2017 and have almost completed my qualification as a welder and crane fitter. I would definitely recommend an apprenticeship here, it's really hands on and interesting, and I learn new things every day. My favourite task is welding but I have learned lots of different skills in the workshop such as crane fitting, HGV body fabrication, welding, grinding and much more. When I finish my qualification I'm looking forward to staying at T H WHITE as a fully-qualified commercial vehicle body builder.

APPRENTICESHIP OPPORTUNITIES

T H WHITE Group apprenticeships in:

AGRICULTURE
PROJECTS
GROUND CARE
DAIRY
LORRY CRANES
ENERGY, FIRE & SECURITY

leading to industry qualifications

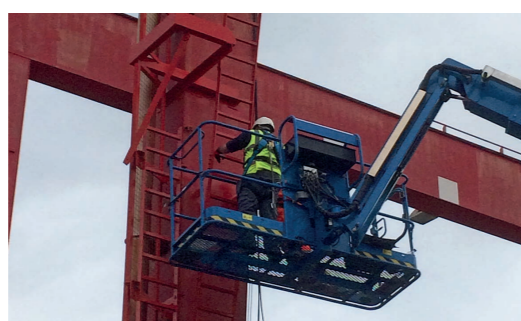

T H WHITE PROJECTS

T H WHITE Projects has built a reputation as a market leader in designing, engineering and building grain storage and processing facilities.

Besides large grain storage projects, we also work on smaller farms and agricultural schemes as well as industrial, commercial and engineering projects, offering bespoke fabricated steelwork solutions such as platforms, towers and gantries.

Apprentices in this division will study on a three year NVQ programme in mechanical engineering, learning on the job in areas including project proposals, sales, marketing, project planning and design engineering, including using 2D and 3D design packages. Additional training can include industry and supplier training, health and safety, on site and off site experience.

Jobs in this division after completion of the apprenticeship can include roles such as Project Engineer or Design Engineer.

APPRENTICESHIPS WITH T H WHITE GROUP

From humble beginnings as an agricultural ironmonger in 1832, T H WHITE has been operating for almost 200 years. While maintaining its roots in agriculture and engineering, the company today has diversified greatly, with business activities spanning grain processing and storage, groundcare machinery, construction equipment, lorry cranes, sustainable energy, and security and fire protection systems.

T H WHITE operates 12 branches with over 500 employees, an annual turnover in excess of £100 million and works with over 4,000 suppliers.

We recognise that the future success of our business and the communities and businesses we serve is in the hands of the future generation, and that education and training are key to that success.

Apprenticeships are a great alternative to traditional study at college or sixth form. An apprenticeship gives you the opportunity to earn while you learn, get experience and learn on-the-job skills from work colleagues, and gain industry recognised qualifications at the same time.

We offer a successful apprenticeship scheme with recognised qualifications across our divisions to help people gain the knowledge and skills needed for a successful career.

Find out more about the apprenticeship opportunities in this brochure, and visit our website for more information www.thwhite.co.uk/apprenticeships.

We look forward to hearing from you

Alexander Scott
Group managing director

T H WHITE GROUND CARE

T H WHITE's Groundcare division provides sales, parts and service of groundcare and forestry equipment to professional users. We are main dealers for leading brands including Ransomes, Jacobsen, Iseki, Wiedenmann and many others.

Apprenticeships in the Groundcare division can lead to jobs as qualified groundcare machinery engineers who may also move into the sales or parts department. Apprentices study at college on block release leading to an NVQ in Landbased Engineering.

Apprentices gain experience in a range of practical areas including training in electronic and hydraulic systems, maintaining grass cutting heads on a number of different machines, onsite and off-site work such as on private estates, golf courses, contractors and local authorities and health and safety training. In addition, apprentices have the opportunity for specialised product training from suppliers and registration on the Landbased Technician Accreditation scheme.

T H WHITE DAIRY

Our Dairy Division supplies and maintains milking equipment, bulk milk tanks and refrigeration equipment, electrical installations and slurry handling equipment. We are an official agent for DeLaval equipment as well as being the main UK agent for the unique AirWash Plus teat dip and rinse system.

We also design and install milking parlours, livestock control systems and slurry handling systems, using in-house CAD facilities for design planning.

Apprentices will either study towards an NVQ in Refrigeration, alongside developing skills in servicing, repairing and installing bulk milk tanks, or an NVQ in Electrical Engineering, learning how to install electrical equipment and voluntary milking systems in milking parlours, and conduct testing and inspections.

PALFINGER UK

PART OF T H WHITE GROUP

Now operating as Palfinger UK, our Lorry Cranes division has been the official importer of Palfinger cranes for over 30 years. Palfinger UK also supplies Orteco pile driving equipment. Our workshops and offices in Bradford, Devizes and Falkirk are home to body building facilities, crane mounting bays, technical design teams, parts, service and repair departments.

Careers in this division can vary from welders and fitters through to electricians and body builders, customer service staff, design engineers and more!

We offer an engineering scheme with a final qualification in Engineering Operations and the opportunity to progress onto a higher-level apprenticeship afterwards.

All apprentices can undergo training in fork lift operation, specialist product training from suppliers and health and safety training.

T H WHITE ENERGY, FIRE & SECURITY

T H WHITE Energy, Fire and Security is one of the region's leading specialist contractors, focused on the design, build and maintenance of fire alarms, security systems, CCTV, access control systems, system monitoring, call-out support and maintenance. We are also OLEV-approved installers of electric vehicle charging systems.

Our business purpose is to make our customers' buildings greener, safer and more efficient, for generations.

Apprenticeships in this division could lead to positions such as installation engineers, designers, technical sales or service engineers, and can lead to the completion of a qualification in alarm design and installation. Apprentices will work with our experienced engineers and also attend a wide variety of manufacturer training.
